Subject: Dimock RSK-175 results

Here are the methane, ethane, ethene results for the Dimock samples received in May. Note that there are changes from the preliminary results previously provided to you. The FBs and TBs were re-run due to suspected contamination and, indeed, were clean the second time around.

Also note that the SEDD file is included. I did figure out what the problem was and I can generate the files without the duplicate surrogate entries now. This one should be OK.

Let me know what you would like done about previous SEDD files. It would not be a particularly difficult task to regenerate the SEDD files for the previous submissions, but it will take a fair bit of time and if they are not ever going to be used I would rather not do it.
